EDUCATION

Gandhi Institute of Technology and Management – School of Technology *2023 – Present*

Bachelor of Technology in Computer Science & Engineering

Cumulative GPA: 9.24/10 – Semester GPA: 9.55/10

RELEVANT COURSEWORK

- **AI/ML:** Artificial Intelligence, Artificial Intelligence Applications, Natural Language Processing, Data Warehousing and Mining
- **Core CS:** Compiler Design, Database Management Systems, Design and Analysis of Algorithms, Operating Systems, Computer Networks, Object Oriented Programming with Java, Data Structures, Formal Languages and Automata Theory
- **Security:** Cryptography and Network Security
- **Math:** Linear Algebra, Discrete Mathematics, Graph Theory, Probability and Statistics, Number Theory

EXPERIENCE

Generative AI Intern — 🌟 **Certificate**

June 2025 – August 2025

Indian Institute of Technology, Kanpur

- Completed internship in Generative AI with hands-on model development and experimentation
- Gained practical experience in Diffusion Models, LLMs, and neural architectures for AI-based content generation
- Developed and tested generative AI pipelines, improving output quality and inference efficiency

PROJECTS

Image Generation using Diffusion Model — 🔗 **Check it out!**

Jan 2024 – Mar 2024

Research Project

- Built an AI Image Generator using diffusion models that transforms text prompts into realistic, high-quality images
- Achieved strong results in terms of creativity, detail, and accuracy to user inputs
- Successfully deployed the system with an interactive interface, enabling real-time image generation for use in art, design, and creative applications

Industry Insight GPT — 🔗 **Check it out!**

Oct 2025 – Dec 2025

Research Project

- Built IndustryInsightGPT, an industry-focused LLM using Hugging Face with FAISS/ChromaDB for semantic search
- Fine-tuned for high-accuracy, context-aware domain insights with scalable PDF ingestion pipeline
- Deployed on Hugging Face Spaces with an interactive user interface

Real-Time Object Detection — 🔗 **Check it out!**

Jan 2026 – Mar 2026

Research Project

- Developed a client-side real-time object detection system using Hugging Face Transformers and DETR-ResNet-50 model
- Implemented webcam integration with real-time bounding box visualization and confidence scoring
- Built entirely in browser using JavaScript with no backend dependencies

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Java, JavaScript, SQL, HTML/CSS

AI/ML & Data Science: TensorFlow, PyTorch, Scikit-learn, Keras, Hugging Face, Pandas, NumPy, Jupyter Notebook, Google Colab

Web Development: React, Node.js, Vercel

Databases: MySQL, Oracle SQL, Microsoft SQL Server, SQLite

Cyber Security: Wireshark, Splunk, Kali Linux, Nessus, Metasploit, Snort, ELK Stack

Productivity Tools: MS Word, Google Docs, LibreOffice Writer, Notepad++, MS PowerPoint, Google Slides, Canva, LibreOffice Impress, Prezi, MS Excel, Google Sheets
